EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

- a.) The claim after claim 7, mistakenly labeled 1, should be labeled 8. Please change 1 to 8.

REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: The instant application discloses a method and apparatus for measuring the phase noise of an low noise block (LNB) and other devices while the device under test is on line is disclosed. A search of prior art records has failed to teach or suggest, alone or in combination:

“a system for measuring phase noise, comprising: a tuner for tuning a signal from a low-noise block converter (LNB) and converting the signal to a baseband signal; at least one analog-to-digital converter (ADC) for capturing data from the baseband signal; a timing processor for acquiring and tracking symbol timing of the captured data of the baseband signal; a carrier processor for determining unwrapped phase history data from the tracked symbol timing; a line fitting processor for determining a linear phase by fitting a straight line to the unwrapped phase history data; and a subtractor for subtracting the linear phase from the phase history data to produce a residual phase of the carrier, wherein the residual phase of the carrier is substantially a performance measurement of the LNB” as disclosed in claim 1.

“a method for measuring phase noise, comprising the steps of: tuning a signal from a low noise block converter (LNB) and converting the signal to a baseband signal; capturing data from the baseband signal; acquiring tracking the captured data of the baseband signal to determine symbol timing tracked data; determining unwrapped phase history from the symbol timing tracked data; fitting a straight line to the unwrapped phase history data to determine a linear phase; and subtracting the linear phase from the phase history data to produce a residual phase of the signal, wherein the residual phase is substantially a performance measurement of the LNB” as disclosed in claim 9.

Art Unit: 2611

“a system for measuring phase noise, comprising: means for tuning a signal from a low noise block converter (LNB) and converting the signal to a baseband signal; means for capturing data from the baseband signal; means for acquiring and tracking symbol timing of the captured data of the baseband signal; means for determining unwrapped phase history data from the tracked symbol timing; means for determining a linear phase by fitting a straight line to the unwrapped phase history data; and means for subtracting the linear phase from the phase history data to produce a residual phase of the signal, wherein the residual phase is substantially a performance measurement of the LNB” as disclosed in claim 17.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”
